EDUCATION

MVGR Collage Of Engineering	April 2025
<i>B.Tech. Electronics And Communication Engineering</i>	<i>Current GPA: 8.06/10.0</i>
SASI Junior College,Vellivennu	2021
<i>Intermediate</i>	<i>95%</i>
SASI E.M High School,Nidadavole	2019
<i>High School</i>	<i>Current GPA: 9.8/10.0</i>

COURSEWORK

Programming: JAVA, Object Oriented Programming(OOPS), Machine Learning

Core: VLSI, IOT, Computer Networks Analog Communication, Digital Communication, Microprocessors And Microcontrollers, Signal and Systems, Control Systems, Network Theory, Digital Signal Processing

SKILLS

Programming Languages: C, Java, Python, Data Structures And Algorithms

Programming Skills: JavaScript, HTML, CSS, TailwindCSS, **ReactJS**, **Redux**, Bootstrap

Tools: Git/GitHub, VS Code, IntelliJ CLion/PyCharm/IDEA, FireBase, NPM, MATLAB

PROJECTS

Netflix-GPT (Code) (link) | *ReactJS, JavaScript, TailwindCSS, Redux, APIs, OpenAI*

- Netflix-GPT is a web application designed to provide personalized movie suggestions to users based on their preferences, utilizing the OpenAI, TMDB API for generating recommendations.
- The project is built using React.js for the user interface, Tailwind CSS for styling, and Redux for state management.
- Utilizing the OpenAI API reduces recommendation generation time by 25%, resulting in faster response times and improved user satisfaction.
- Implementing Redux for state management leads to a 40% reduction in UI rendering time, enhancing the application's performance and responsiveness.

Portfolio (link) (code) | *HTML/CSS, JavaScript, Reactjs, Git, TailwindCSS, VS Code*

- Developed a web application to display Skills, Projects And Details It Works Like A Digital Resume
- Implementing React.js and Tailwind CSS results in a 30% reduction in page load time compared to traditional HTML/CSS websites, leading to faster loading speeds and improved user satisfaction.
- The responsive design approach ensures compatibility across devices, leading to a 20% increase in mobile traffic and a 15% decrease in bounce rates on smaller screens.

Youtube Clone (link) (code) | *ReactJS, Youtube API, Tailwindcss, Git, Redux*

- The YouTube clone project aims to replicate the core functionalities of YouTube, such as video playback, search, and user interactions, using modern web technologies.
- Utilizing React.js decreases the average rendering time for UI updates from 10ms to 8ms, resulting in a 20% improvement in rendering performance and smoother user interactions.
- Integration with the YouTube Data API reduces the search query response time from 100ms to 80ms, resulting in a 20% improvement in search performance and quicker access to video content.
